Study information

Scientific Title

A multicentre randomised interventional trial of chewing sugar-free gum post-operatively to reduce hospital stay and post-operative ileus

Study objectives

The primary hypothesis to be addressed is that chewing sugar-free gum post-operatively reduces the length of hospital stay via a reduction in the duration of ileus. Other hypotheses to be addressed are that chewing sugar-free gum post-operatively reduces co-morbidities associated with ileus (including clinical outcomes such as vomiting, infection, and anastomotic dehiscence), improves quality of life and reduces costs of care.

Health condition(s) or problem(s) studied

Topic: Oral and Gastrointestinal; Subtopic: Oral and Gastrointestinal (all Subtopics); Disease: Gastrointestinal

Interventions

200 patients will be randomised to receive usual care plus gum and 200 will be randomised to receive usual care only. Patients in the gum chewing arm will be asked to chew gum for at least 10 minutes four times a day for five days (or until discharge, whichever comes first).

Follow-up length: 3 months

Study entry: single randomisation only

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

Length of hospital stay, calculated from date of operation to date of discharge.

Secondary outcome measures

1. Vomiting, measured during days 1 - 5 post-operation
2. Infection, measured during days 1 - 5 post-operation
3. Anastomotic dehiscence, measured during days 1 - 5 post-operation
4. Quality of life, measured during days 1 - 5 post-operation, and at 6 and 12 weeks post-operation
5. Costs of care, measured during days 1 - 5 post-operation, and at 6 and 12 weeks post-operation

Overall study start date

01/04/2009

Completion date

31/03/2012

Eligibility

Key inclusion criteria

We will include a wide range of patients (aged greater than 18 years, either sex) to ensure that the findings of this study will be broadly applicable.

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

Planned sample size: 400; UK sample size: 400

Key exclusion criteria

1. Less than 18 years of age
2. Patients with Crohn's disease (as they may have markedly different nutritional needs and recoveries to most patients undergoing large bowel resection)
3. Emergency cases (non-gastrointestinal [GI] surgeons may do emergency surgery and pre-operative consent may not be possible)
4. Women who are pregnant or lactating

Date of first enrolment

01/04/2009

Date of final enrolment

31/03/2012
