# Study information

## Scientific Title

A randomised double-blind placebo-controlled trial to investigate the efficacy and side-effects of pregabalin for the treatment of neuropathic pain in humans following severe burn injury

## Study objectives

Not provided at time of registration

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

Not provided at time of registration

## Study design

Randomised controlled trial

## Primary study design

Interventional

## Secondary study design

Randomised controlled trial

## Study setting(s)

Not specified

## Study type(s)

Not Specified

## Participant information sheet

## Health condition(s) or problem(s) studied

Neuropathic pain following burn injury may occur in the acute or chronic state.

## Interventions

Randomised trial of pregabalin versus placebo

## Intervention Type

Drug

## Phase

Not Specified

## Drug/device/biological/vaccine name(s)

pregabalin

**Primary outcome measure**

Not provided at time of registration

**Secondary outcome measures**

Not provided at time of registration

**Overall study start date**

01/01/2005

**Completion date**

31/01/2006

## Eligibility

**Key inclusion criteria**

Patients who have severe burn injuries with elements of neuropathic pain.

**Participant type(s)**

Patient

**Age group**

Not Specified

**Sex**

Not Specified

**Target number of participants**

Not provided at time of registration

**Key exclusion criteria**

Not provided at time of registration

**Date of first enrolment**

01/01/2005

**Date of final enrolment**

31/01/2006

## Locations

**Countries of recruitment**

Australia

**Study participating centre**

**Multidisciplinary Pain Centre**

Herston, QLD

Australia

4029
