Study information

Scientific Title
Perioperative antibiotic therapy in adenoidectomy with partial tonsillectomy in children - prospective, interventional, double blinded, single centre, randomised study

Acronym
ABAT

Study objectives
Perioperative antibiotic prophylaxis may influence post-operative recovery in children in whom adenotonsillotomy is performed.

Ethics approval required
Old ethics approval format

Ethics approval(s)
Bioethics Commission at the Regional Medical Chamber in Krakow (Komisja Bioetyczna przy Okręgowej Izbie Lekarskiej w Krakowie, Opinia) approved on the 23rd of Dec 2009 (ref: 178/KBL /iL/2009)

Study design
Prospective interventional double blinded single centre randomised crossover group trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Adenoidal and tonsillar hyperplasia

Interventions
Curette adenoidectomy with scissors tonsillectomy. Oral administration of clindamycine prior to (one dose) and after (2 doses) the surgery.
The total duration of follow up for this trial will be 3 weeks.

The primary and secondary outcomes will be measured at 7, 14 and 21 post-operative days. The children's caregivers will fill a questionnare answering a standardised set of questions concerning the measures. the participants will be questioned about pain intensity using faces Pain Scale 1-10, the caregivers' satisfaction will be rated along 0-10 scale. Diet, physical activity and malorour from the mouth will be analysed according to the parent diary.

Joint sponsor:
Trialist will report results and any problems to the Bioethics Commission at the Regional Medical Chamber in Krakow (Komisja Bioetyczna przy Okręgowej Izbie Lekarskiej w Krakowie) on an annual basis

Intervention Type
Other

Phase
Not Specified

Primary outcome(s)
1. Pain
2. Activity
3. Diet

Key secondary outcome(s))
1. Odour from the mouth
2. Parental satisfaction

Completion date
31/12/2010

Eligibility

Key inclusion criteria
1. Paediatric patients age 3-14
2. Indications for adenoidectomy with partial tonsillectomy
3. Hyperplasia of adenoid and palatine tonsils causing obstructive symptoms, identified from descriptions by the caregivers: snoring, gasping, choking as well as apnoeic episodes, and/or ear effusions

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Child

Lower age limit
3 years

Upper age limit
14 years

Sex
All

Key exclusion criteria
1. Recurrent tonsillitis
2. Previous partial tonsillectomy for the symptoms enumerated above

Date of first enrolment
01/06/2010

Date of final enrolment
31/12/2010
