Study information

Scientific Title

Study objectives

The prevalence of growth hormone deficiency in autoimmune thyroid disease is higher than in the general population.

Please note that as of 07/07/2008 the sources of funding section of this trial was updated. For details of this change, please go to the sources of funding section of this record. On 18/07/2008, the interventions section was also updated.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the local medical ethics committee (Medisch Ethische Toetsings Commissie of the Academic Medical Center Amsterdam) on the 15th December 2005 (ref: MEC 05/249)

Study design

Observational cross-sectional study

Primary study design

Observational

Secondary study design

Cross-section survey

Study type(s)

Screening

Participant information sheet

Health condition(s) or problem(s) studied

Autoimmune hypothyroidism

Interventions

Investigating the prevalence is of growth hormone deficiency in patients with autoimmune hypothyroidism.

Added 18/07/2008:

Insulin-like growth factor I (IGF-I) values were measured from a blood sample. If the IGF-I value was beneath the 10th percentile of the reference values, a growth-hormone-releasing hormone (GHRH)/growth-hormone-releasing peptide 6 (GHRP-6) test was performed.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Prevalence of growth hormone deficiency in patients with autoimmune hypothyroidism, measured a the first visit and when the second test is necessary at a second visit that is planned a few weeks later.

Secondary outcome measures

Quality of life in patients with autoimmune hypothyroidism with or without growth hormone deficiency.

Overall study start date

01/08/2006

Completion date

01/07/2008

Eligibility

Key inclusion criteria

- 1. Autoimmune hypothyroidism
- 2. Adequate thyroxine treatment
- 3. Aged between 20 and 70 years old, both men and women

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

600

Key exclusion criteria

- 1. History of hypothalamic or pituitary disease or known growth hormone deficiency
- 2. Pregnancy
- 3. Hypothyroidism after treatment for Graves' disease or surgery or radioactive iodine (I131)
- 4. Maior concurrent diseases
- 5. Use of medications known to interfere with the growth hormone-Insulin-like Growth Factor-I (IGF-1) axis
- 6. No informed consent
- 7. Alcohol or drug abuse

Date of first enrolment

01/08/2006

Date of final enrolment

01/07/2008
