Study information

Scientific Title

Ultrasound-guided versus palpation-guided steroid injection for plantar fasciitis: a randomised prospective trial

Study objectives

The aim of this study is to determine whether ultrasound-guided injection gives superior results to palpation-guided steroid injection in plantar fasciitis.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Musculoskeletal Diseases: Plantar fasciitis

Interventions

Comparison of steroid injection for the treatment of plantar fasciitis without ultrasound scan guidance and with ultrasound scan guidance.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Not provided at time of registration

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/08/2003

Completion date

01/12/2006

Eligibility

Key inclusion criteria

Patients with clinical features of plantar fascitis who present in the orthopaedic clinic will be approached to participate in the study

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

40 patients

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/08/2003

Date of final enrolment

01/12/2006
