Study information

Scientific Title
A randomised trial of high dose therapy and autologous bone marrow transplantation versus continuing conventional combination chemotherapy for adults with lymphoblastic lymphoma

Study objectives
Not provided at time of registration

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Lymphoma (non-Hodgkin's) cancer

Interventions
All patients receive induction therapy and conventional chemotherapy regimens.
Patients achieving complete remission or partial remission are randomised to either:
1. Regimen A: Continue therapy on conventional regimen. The recommended conventional regimen is modified LSA2L2.
2. Regimen B: High dose therapy and ABMT.

Intervention Type
Drug

Phase
Not Applicable

Primary outcome(s)
Not provided at time of registration

Key secondary outcome(s))
Not provided at time of registration

Completion date
30/04/1997

Eligibility

Key inclusion criteria

1. Histologically documented lymphoblastic lymphoma
2. No prior chemotherapy or radiotherapy, except chemotherapy given for immediate relief of symptoms at presentation
3. Age 15 or over
4. All stages
5. No circulating blasts
6. Normal values for renal and hepatic function, unless directly attributable to lymphoma
7. Normal cardiac function
8. No evidence of Human Immunodeficiency Virus (HIV) infection

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Adult

Sex
All

Total final enrolment
119

Key exclusion criteria
Patients will be excluded if they have HLA-identical siblings who are undergoing allogenic bone marrow transplantation. These patients should be registered with the trials office but will not be randomised.

Date of first enrolment
01/01/1992

Date of final enrolment
30/04/1997
