Study information

Scientific Title

-

Study objectives

To estimate the incidence in patients receiving standard care and also in patients having the vacuum removed early.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised, non-blinded (Phase II)

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Cancer: Breast

Interventions

Standard care vs vacuum removed early.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

To estimate the incidence of seroma in women having standard axillary care (vacuum left intact) and women having vacuum removed on 3rd day.

Key secondary outcome(s)

Not provided at time of registration

Completion date

08/12/2006

Eligibility

Key inclusion criteria

50 RMH patients who are adult women aged over 18 years old and who are undergoing axillary dissection for breast cancer.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

Female

Key exclusion criteria
