Study information

Scientific Title

Randomised trial of water-filtered infrared A (WIRA) warming during insertion of umbilical lines

Study objectives

To determine whether a WIRA lamp in addition to a standard incubator is more effective than standard incubator alone in preventing extremely premature babies from getting cold during insertion of umbilical lines after admission to neonatal medical unit.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Central Manchester Research Ethics Committee, ref 04/Q1407/75, 15/07/2004.

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Neonatal Diseases

Interventions

Infants will be allocated to conventional warming or conventional plus WIRA during admission /stabilisation by block randomisation.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Axillary temperature at completion of umbilical line insertion

Key secondary outcome(s))

No secondary outcome measures

Completion date

31/12/2007

Eligibility

Key inclusion criteria

Infants below 28 weeks admitted to neonatal unit

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Neonate

Sex

Not Specified

Key exclusion criteria

1. Parental consent not obtained
2. Major congenital abnormality

Date of first enrolment

01/09/2004

Date of final enrolment

31/12/2007
