Study information

Scientific Title

A prospective, controlled, randomised study to evaluate pain in split skin graft donor sites dressed with fibrin sealant (Tisseel®, Baxter) and adhesive dressings versus adhesive dressings directly applied to the donor site

Study objectives

Fibrin sealant significantly reduces pain in split skin graft donor sites

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval obtained from Guys and St Thomas' Ethics Committee on 11th January 2008, ref: 06Q0701/92

Study design

Randomised active control parallel assignment

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Treatment

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Pain in split skin graft donor sites

Interventions

A prospective, randomised controlled trial was performed. The self-adhesive fabric dressing Mefix® (Mölnlycke Health Care Ltd) was used as a control and compared to fibrin glue spray (Tisseel®, Baxter Healthcare Ltd) plus Mefix®.

Intervention Type

Procedure/Surgery

Phase

Not Applicable

Primary outcome measure

Daily pain and disability scores from day 1 to 14 post-operatively using a Visual Analogue Scale

Secondary outcome measures

1. Length of hospital stay
2. Duration of requirement for dressings

Overall study start date

11/01/2008

Completion date

31/12/2009

Eligibility

Key inclusion criteria

1. 18 years old and over
2. Conscious during post operative period
3. Small to moderate area of split skin graft (SSG) procedure necessary
4. Lateral thigh SSG donor site preferable

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

50

Key exclusion criteria

1. Hypersensitivity to beef or beef products ((Tisseel® is produced from bovine aprotonin)
2. Those requiring thicker grafts, greater than 8/1000 inch
3. Thigh donor sites unavailable. Back and buttocks can be used as donor sites in certain cases, they may have a different pain profile
4. Known immunodeficiency will have an effect on healing
5. Mental incapacity to consent or undertake questionnaire
6. Concurrently participating in another clinical trial and having received another investigational drug or device within the last 30 days to avoid confounding factors
7. Alternative source of severe distracting pain which may down score donor site pain

Date of first enrolment

11/01/2008

Date of final enrolment

31/12/2009
