Study information

Scientific Title

Study objectives

Can homeopathy in addition to standard care, increase symptom free days and improve asthma control and quality of life in children with poorly controlled asthma?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Added September 2008: favourable ethical opinion from the Oxfordshire Research Ethics Committee B (UK) on 22/11/2005.

Study design

Pilot RCT

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Respiratory: Asthma

Interventions

1. Homeopathy plus standard care
2. Standard care

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

As this is a pilot study there is no primary outcome measure. The research team are actively investigating whether subjective measures such as asthma control or asthma QOL or MYMOP or objective measures such as FEV1, antibiotic use will be most useful.

Key secondary outcome(s))

Not provided at time of registration

Completion date

30/11/2006

Eligibility

Key inclusion criteria

The study aims to recruit 50-80 participants divided equally between intervention and control groups. Inclusion criteria: Children aged 7-14 years who are attending respiratory outpatients and who are at step 2 or step 3 or above on the British Thoracic Guidelines.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Child

Lower age limit

7 years

Upper age limit

14 years

Sex

Not Specified

Key exclusion criteria

Children who are presently using homeopathy or who are too unwell to take part or refuse informed consent.

Date of first enrolment

01/12/2005

Date of final enrolment

30/11/2006

Locations
