Study information

Scientific Title

Study objectives

To establish what are the most effective question styles psychologists can use to assess the emotional state of clients (with learning disabilities). The objective being to investigate if one method is more effective than others and therefore a more useful tool within the assessment and therapeutic setting.

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Learning difficulties

Interventions

Randomised trial within and between groups. Structured interview following presentation of five film clips. The structured interview will include five different styles of questions (line drawings, photographs, open-ended, closed and either/or questions). The Statistical Package for the Social Sciences (SPSS) will be used to analyse the data.

Intervention Type
