Study information

Scientific Title
QUEST - improving the quality of school mental health: a quality improvement evaluation for school nurses and teachers. Phase II - cluster randomised trial

Acronym

QUEST

Study objectives

Primary hypothesis:

A specifically designed professional development training and support programme for school nurses will result in significant changes in the sensitivity of their detection of depression.

Secondary hypothesis:

The training will result in significant improvements in school nurse's knowledge and attitudes concerning depression.

Ethics approval required

Old ethics approval format

Ethics approval(s)

The Royal Free Hospital and Medical School Research Ethics Committee, 23/04/2008, ref: 08/H0720/42

Study design

Cluster randomised controlled trial

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Depression

Interventions

The intervention is a training and support package for school nurses, involving two educational meetings delivered to all consenting nurses (in groups of 12 - 16) within randomly allocated PCTs. Printed educational materials, clinical guidelines, information resources, and rating scales will accompany the sessions to enable ongoing learning and skill development. The training sessions will be standardised in relation to topics and skills addressed, but will be designed to enable interactive discussion and consideration of cases presented by participants. Sessions will be delivered by a trainer working on the project team with assistance from local Child and Adolescent Mental Health Services (CAMHS).

The comparator group is standard practice, and the total duration of follow-up will be 12-months.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Vignette measures for depression recognition have been specifically developed and piloted for this study. Participant's case recognition prior to training, post-training, and at 12-months will be examined for changes in sensitivity.

Key secondary outcome(s)

1. School nurse's attitudes will be measured using an adapted version of a validated attitude measure - the Depression Attitude Questionnaire
2. Measures of knowledge will be conducted using a knowledge measure based on relevant items from current evidence based guidelines

These measures will be conducted pre- and post-training and 12-months later.

Completion date

01/04/2010

Eligibility

Key inclusion criteria

All school nurses employed by the recruited Primary Care Trusts (PCTs) will be eligible for the training intervention and evaluation. This includes registered school nurses, school nurse specialist practitioners (who are on part 3 of the NMC register), school nurse team leaders and special needs school nurses.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

Does not comply with the above inclusion criteria

Date of first enrolment
