Study information

Scientific Title
The health benefits of a participative community music programme for older people (Silver Song Clubs): a controlled evaluation single centre randomised unblinded trial

Study objectives
Primary hypothesis:
Singing groups for older people improve both physical and mental aspects of quality of life when compared with usual activities.

Secondary hypotheses:
1. Singing groups for older people are more cost effective than usual activities
2. Singing groups for older people reduce anxiety and depression when compared with usual activities

Ethics approval required
Old ethics approval format

Ethics approval(s)
Added 16/03/2010:
Surrey Research Ethics Committee approved on the 20th January 2010 (ref: 10/H1109/5)

Study design
Single centre randomised unblinded controlled trial

Primary study design
Interventional

Secondary study design
Randomised controlled trial

Study setting(s)

Study type(s)
Quality of life

Participant information sheet
Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied
General health status

Interventions

Intervention: 90 - 120 minutes group singing and related activities, weekly for 12 weeks, with follow up measures for a further 12 weeks.
Control: Usual activities

Intervention Type
Other

Phase
Not Applicable

Primary outcome measure
Health related quality of life measured with 12-item short form health survey (SF-12) at baseline, 12 weeks (post-intervention) and 24 weeks.

Secondary outcome measures
1. Health utility, measured with EQ-5D at baseline, 12 weeks (post-intervention) and 24 weeks
2. Anxiety and depression measured with Hospital Anxiety and Depression Scale (HADS) at baseline, 12 weeks (post-intervention) and 24 weeks
3. Service use questionnaire at baseline, 12 and 24 weeks

Overall study start date
01/01/2010

Completion date
31/12/2011

Eligibility

Key inclusion criteria
1. Community dwelling volunteers
2. Aged 60+ years, either sex
3. Able to give informed consent and complete questionnaires

Participant type(s)
Patient

Age group
Senior

Sex
Both

Target number of participants
240

Key exclusion criteria
Individuals unable to give informed consent or complete questionnaires.

Date of first enrolment

01/01/2010

Date of final enrolment
31/12/2011
