Study information

Scientific Title

A randomised controlled pilot study to assess the benefit of using Reiki to treat chronic plaque psoriasis

Acronym

RAP

Study objectives

That the use of Reiki healing treatment of moderate to severe psoriasis is measurably effective and the same results are able to be reproduced by any Reiki II practitioner.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethics approval received from the Devon and Torbay Research Ethics Committee (REC) on the 4th October 2007 (ref: 07/H0202/108).

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Chronic plaque psoriasis

Interventions

Arm A: conventional topical treatment (as per current local practice may include the following: emollients, vitamin D creams and ointments [calcipotriol etc.], tar preparations [Alphosyl and Exorex] and topical steroids or combinations of the above - applied twice daily as per instructions per standard practice, dependant on the topical treatment of choice) and five Reiki treatments given over a 3 month period.

Arm B: five consecutive reiki treatments only over 3 months but advised to continue using moisturisers.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

1. Physical Assessment: using the Psoriasis Area and Severity Index (PASI) assessment tool, validated by photographic evidence
2. Quality of Life Assessments with Dermatology Life Quality Index (DLQI) to show to which degree the psoriasis affects the patient's normal activities
3. Psychological assessment (12-item General Health Questionnaire [GHQ12]) to show if there has been any general improvement in the quality of life, regardless of the state of psoriasis
4. Health Economics Assessment

Secondary outcome measures

1. The Healing Assessment (HA) 1.1 will identify any possible trends in psychological triggers
2. The Healing Assessment (HA) 2.1 will be used to assess the relevance of any unusual experiences during treatment and to note the areas of the body which the healer feels may require extra attention

Overall study start date

15/10/2007

Completion date

30/09/2009

Eligibility

Key inclusion criteria

1. Patients who suffer from stable chronic plaque psoriasis that would be appropriate for treatment by topical agents
2. Informed consent
3. Adults aged 18 years or over, male or female

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

30

Key exclusion criteria

1. Pregnant women
2. Patients with severe disease
3. Patients with unstable psoriasis and putular psoriasis
4. Patients who have already experienced healing
5. Unable to give informed consent

Date of first enrolment

15/10/2007

Date of final enrolment

30/09/2009
