Protocol serial number
WIL-15

Study information

Scientific Title

Acronym
Wilate-SET

Study objectives
The efficacy of Wilate® in clinical practice is comparable to the efficacy in clinical trial patients.

As of 07/05/2011 the anticipated end date for this trial has been extended from 31/07/2009 to 31/07/2012

Ethics approval required
Old ethics approval format

Ethics approval(s)
As the procedures during this observational study do not interfere with the patient's usual treatment and monitoring of treatment, this study is not regarded as a clinical study as defined by EU Directive 2001/20/EC. Therefore approval by an Independent Ethical Committee as an Institutional Review Board is not required.

Study design
Non-interventional, observational, open, prospective, multi-centre study

Primary study design
Observational

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Von Willebrand's disease

Interventions
Documentation of details of diagnosis and bleeding frequency at entry, details of bleeding episodes and surgical procedures during 2-year individual observation period. Documentation of details of each injection including assessment of efficacy and tolerability at a 4-point verbal rating scale. Documentation of relevant laboratory assessments if performed.

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Wilate®

Primary outcome(s)
Percentage of efficacy assessments with rating "excellent/good".

Key secondary outcome(s))
Percentage of tolerability assessments with rating "excellent/good".

Completion date
31/07/2012

Eligibility

Key inclusion criteria
Patients (any age and gender) suffering from hereditary or acquired Von Willebrand's disease requiring von Willebrand factor (VWF)/coagulation factor eight (FVIII) concentrate.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Other

Sex
All

Key exclusion criteria
Does not comply with the above inclusion criteria

Date of first enrolment
01/02/2005

Date of final enrolment
31/07/2012
