Study information

Scientific Title

Manchester Asthma and Allergy Study - primary prevention of asthma and allergy by allergen avoidance in high risk infants: a randomised controlled trial

Acronym

MAAS

Study objectives

Living in a low allergen environment reduces the risk of primary sensitisation and the development of atopic disease in children at high risk

Ethics approval required

Old ethics approval format

Ethics approval(s)

South Manchester Research Ethics Committee, 24/03/1994, ref: WJP/CMI/ERP/94/032

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Prevention

Health condition(s) or problem(s) studied

Asthma

Interventions

House dust mite allergen avoidance versus no intervention.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

1. Asthma at age 5, 8, 11, and 14 years
2. Sensitisation at age 1, 3, 5, 8, 11 and 14 years

Key secondary outcome(s)

Wheeze and eczema at age 1, 3, 5, 8, 11 and 14 years

Completion date

01/06/2019

Eligibility

Key inclusion criteria

High-risk children (both parents atopic) of either sex born at Wythenshawe Hospital Manchester and Stepping Hill Hospital Stockport between January 1996 and April 1998

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Child

Sex

All

Key exclusion criteria

Premature birth less than 32 weeks gestation

Date of first enrolment

01/09/1995

Date of final enrolment

01/06/2019

Locations

Countries of recruitment

United Kingdom

England
