Plain English summary of protocol

Background and study aims

Physical inactivity and increased sedentary behavior are increasingly common problems and can lead to overweight, obesity, diabetes, heart disease, and decreased motor and cognitive capacity among children and adolescents. Establishing some healthy habits in childhood is essential for proper physical, motor, and cognitive development. The aim of this study is to describe the level of physical activity, sedentary behavior and sleep of children and adolescents in the Autonomous Community of the Basque Country.

Who can participate?

All children aged 6-17 enrolled in a school in the Basque Autonomous Community

What does the study involve?

Participants will be selected randomly based on gender, age, school, school location and socioeconomic status. They will have to wear an accelerometer for 7 full days and fill in a health habits diary.

What are the possible benefits and risks of participating?

The main benefit is to find out whether children and adolescents are sufficiently physically active on a daily basis, and assess their sedentary behavior and the relationship between these behaviors and sleep. This study has no risks as the participants will only have to wear an accelerometer and fill in a diary.

Where is the study run from?

The study is conducted from the Basque Autonomous Community and is carried out by the Basque Government, the University of Deusto and Mondragon Unibertzitatea, Mugikon and Athlon (Spain)

When is the study starting and how long is it expected to run for?
September 2020 to April 2022

Who is funding the study?
The Basque Government (Spain)

Who is the main contact?
Dr Aitor Coca Nuñez
aitor.coca@euneiz.com

Study information

Scientific Title
Study protocol on the level of physical activity, sedentary behavior, and sleep in the child and adolescent population in the Autonomous Community of the Basque Country (6–17 years old)

Acronym
MUGIKERTU

Study objectives
To describe the level of physical activity, sedentary behavior, or sleep of the child and adolescent population from 6 to 17 years old in the Basque Autonomous Country.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved 14/10/2020, Euskadi Drug Research Ethics Committee (Basque Government Department of Health, CEIm-Departamento de Salud del Gobierno Vasco, C/ Donostia-San Sebastián, nº 1. Health condition(s) or problem(s) studied

Physical activity, sedentary behavior, sleep

Interventions

This study aims to recruit 1,111 representative random samples of children and adolescents from 6 to 17 years old from the Basque Autonomous Country. Participants must wear the ActiGraph WGT3X-BT accelerometer for a full 7 days and fill out a habit log of physical activity, sedentary behavior, and sleep routine. Participants will be randomly selected.

Intervention Type

Behavioural

Primary outcome(s)

The level of physical activity, sedentary behavior, and sleep routine measured by ActiGraph WGT3X-BT accelerometers for 7 days.

Key secondary outcome(s)

There are no secondary outcome measures

Completion date

15/04/2022

Eligibility

Key inclusion criteria

1. Belong to the student body of a participating school or institute
2. Have authorization to participate through a signed informed consent by the parents or legal guardians of the child or adolescent

Participant type(s)

Other

Healthy volunteers allowed

No

Age group
