Study information

Scientific Title

Study objectives

Is day hospital care more effective than inpatient care for acute psychiatric patients?

Ethics approval required

Old ethics approval format

Ethics approval(s)

The study was approved by the Ethics Committee of the East London Health Authority.

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Hospital

Study type(s)

Treatment

Participant information sheet

Health condition(s) or problem(s) studied

Non-organic psychiatric disorder

Interventions

Patients were randomised to:

1. Day hospital treatment
2. Conventional wards

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

1. Client Service Receipt Inventory (CSRI)
2. Brief Psychiatric Rating Scale (BPRS)
3. Health of the Nation Outcome Scale (HONOS)

4. Manchester Short Assessment of Quality of Life (MANSA)

5. Aitkin scale

6. Client's Assessment of Treatment Scale (CAT)

Secondary outcome measures

No secondary outcome measures

Overall study start date

01/08/2000

Completion date

16/08/2003

Eligibility

Key inclusion criteria

1. Aged between 18 to 65 years
2. Non-organic psychiatric disorder other than all forms of addiction
3. Need of acute and intensive psychiatric treatment in hospital or day hospital
4. No absolute indication for in-patient treatment (treatment under the Mental Health Act, severe risk to themselves or others requiring supervision on a ward)
5. Not homeless or without social support

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Upper age limit

65 Years

Sex

Both

Target number of participants

240

Key exclusion criteria

1. Compulsory admission
2. Homelessness
3. Organic brain disorder
4. A primary diagnosis of an addictive disorder
5. Inability to give informed consent

Date of first enrolment

01/08/2000

Date of final enrolment

16/08/2003
