Study information

Scientific Title

A pilot study using a single blind placebo controlled trial into the efficacy and specificity of the acupuncture point CV24 in controlling the gag reflex to preimplant dental treatment (impression taking)

Study objectives

A pilot study using a single blind placebo controlled trial into the efficacy and specificity of the acupuncture point CV24 in controlling the gag reflex to preimplant dental treatment (impression taking).

Updated 02/09/2015: This trial did not proceed past the recruitment of the first few participants, and was abandoned due to changes in the workplace. No records were made, and no research undertaken.

Treatment

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Oral Health: Gag reflex

Interventions

RCT acupuncture versus control point.

1. Treatment group: acupuncture at point CV24
2. Control group: acupuncture at point X1.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Suppression of gag reflex

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/07/2006

Completion date

01/12/2006

Eligibility

Key inclusion criteria

1. Patients presenting evidence of gag reflex
2. Willing to accept acupuncture
3. Treatment requires upper alignment dental impression

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

25

Key exclusion criteria

1. Patients with normal gag reflex
2. Patients with known bleeding dyscrasias, but not including those who are anticoagulated
3. Patients with poor communication (language hearing difficulties)

Date of first enrolment

01/07/2006

Date of final enrolment

01/12/2006
