Health condition(s) or problem(s) studied

Mental and Behavioural Disorders: Depression

Interventions

A co-ordinator will establish proactive links with GPs in the area, organize data collection for the research, assess the need for an interpreter to facilitate sessions, and oversee the use of computers by clients GPs will refer patients if they meet certain criteria. Interested individuals will be asked to give signed consent and then complete a baseline CORE assessment before being randomly allocated to one of the three self-help tools.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

1. Differences in the following indicators of mental health and use of services: total antidepressants dispensed during the 6 months following the diagnosis
2. Use of counselling or other secondary mental health services in the 6 months following the diagnosis
3. Programme completed or interrupted
4. Consultations with primary care staff over the 6 months follow up period
5. Consultations with secondary care over the 6 months follow up period
5. CORE assessment scores at 6 weeks.

Secondary outcome measures

At six months the following data items will be recorded for all patients:

1. Consultations with primary care staff over the 6 months follow up period
2. Total antidepressants dispensed during the 6 months following the diagnosis (information gathered from the GP's computer)
3. Use of counselling or other secondary mental health services in the 6 months following the diagnosis and referral to the service (information gathered from the local counseling service and Oxleas mental health Trust)
4. Programme completed or interrupted

CORE assessment scores at 8 weeks

Overall study start date

01/06/2006

Completion date

01/12/2007

Eligibility

Key inclusion criteria

1. Patients aged 18+ years old
2. Suffering from depression, mixed anxiety and depression or anxiety disorder
3. Not receiving any form of psychological treatment or counselling

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Not Specified

Target number of participants

180 referrals to the research although not all have completed the treatment and followup protocol.

Key exclusion criteria

1. Active suicidal ideas
2. A current or lifetime diagnosis of psychosis, personality disorder or organic mental disorder
3. Alcohol and/or drug dependence
4. Have taken medication for anxiety and /or depression continuously for 6 months or more immediately prior to entry

Date of first enrolment

01/06/2006

Date of final enrolment

01/12/2007
