Depressive symptoms

Interventions

The course looking for meaning is the intervention. It is a group-oriented intervention of twelve sessions of two hours, conducted in groups of about ten participants. Based on certain themes, in this intervention participants are invited to take memories from their own lives. The special thing about the course is that reminiscence is linked to creative assignments. Imagination and creativity are viewed as important keys to perceived meaning, competencies and well-being. Via targeted questions, participants evaluate and re-evaluate their own lives.

The control group receive no treatment.

Phase

Not Specified

Primary outcome measure

1. Depressive symptoms (Centre of Epidemiological Studies-Depression scale [CES-D], Bouma, Ranchor, Sanderman and van Sonderen 1995)
2. Well-being (Well-being Scale, Ryff and Keyes, 1995)
3. Perceived meaning (SELE Scale, Dittmann-Kohli and Westerhof 1997)
4. Quality of life (EuroQol Group 1990)

Secondary outcome measures

1. Mastery (Pearlin Mastery Scale, Pearlin and Schooler 1978)
2. Social support (van Sonderen et al. 1989)
3. Personality structure (NEO-FFI)
4. Demographic variables and important life events

Overall study start date

01/11/2005

Completion date

01/11/2007

Eligibility

Key inclusion criteria

Elderly people above the age of 55 with slight to moderate depressive symptoms.

Participant type(s)

Patient

Age group

Senior

Sex

Both

Target number of participants

360

Key exclusion criteria

1. People with severe depressive symptoms and a CES-D score higher than 24
2. The absence of depressive symptoms, a score lower than 5 on the CES-D
3. People being treated elsewhere (with medication) when they register
4. People unable to function in a group
