Study information

Scientific Title

A prospective, randomised, clinical trial comparing trapezial denervation with trapeziectomy for the surgical treatment of arthritis at the base of the thumb

Study objectives

Trapezial denervation offers the most effective option available with a shorter operating time and rapid rehabilitation at less cost to both patient and hospital.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomized controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Treatment of arthritis at the base of the thumb

Interventions

A range of objective and subjective assessments carried out by the Occupational Therapists at three intervals:

1. Prior to surgery
2. 6 months after surgery
3. 12 months after surgery
4. 5 years after surgery

Measure of Health Status, using EQ5D.

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

1. Strength
2. Range of movement
3. Pain
4. Functional ability
5. Patient satisfaction

Key secondary outcome(s))

Not provided at time of registration

Completion date

31/12/2013

Eligibility

Key inclusion criteria

Patients with osteo-arthritis at the base of the thumb who attend the Pulvertaft Hand Centre.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Total final enrolment

55

Key exclusion criteria
