Plain English summary of protocol

Background and study aims

Youth who facing obstacles to positive development including racism and poverty are at a higher risk of poor health, limited success at school and work, and lower quality of life as adults. These negative emotional and physical consequences of barriers to positive development faced during youth may be counteracted by programs that promote physical activity, social development, and healthy behavior. Sport for Development programs are one possible opportunity for youth facing barriers to engage in activities that foster their positive development, which may improve their socioeconomic status, quality of life and long-term health. This study aims to measure the impact of an urban Sport for Development facility on positive youth development in youth facing barriers.

Who can participate?

Participants aged 6-29 recruited from programs at an urban Sport for Development facility

What does the study involve?

Participants will take part in a variety of Sport for Development programs that use sport as a tool for teaching life skills. Participants will be divided into 3 age groups. Aspects of positive youth development will be evaluated using surveys and pedometers when youth first enter the program and after 6 months, 1-year, and 2-years. Focus groups will also be used to learn about youth's experiences and the impact of the facility and programs in their lives.

What are the possible benefits and risks of participating?

Some questions asked in the surveys or focus groups may cause distress – for example, youth may be asked questions about their mood and self-esteem. Benefits for participants include learning useful and interesting information about themselves and helping MLSE LaunchPad improve its programs to better help youth be successful and reach their goals.

Where is the study run from?

MLSE LaunchPad, Canada

When is the study starting and how long is it expected to run for?
March 2017 to March 2020

Who is funding the study?
Province of Ontario's Ministry of Children and Youth Services.

Who is the main contact?
Marika Warner, Director of Research and Evaluation at MLSE LaunchPad
Marika.Warner@mlselaunchpad.org

Study information

Scientific Title
MLSE LaunchPad Evaluation 2017-2020

Study objectives

Participation in MLSE LaunchPad programming and wrap around services will result in increased physical literacy, physical activity, and rates of continued participation in sport activity for youth aged 6-12; increased positive health behaviours, life skills, academic outcomes, and continued participation in sport activity for youth aged 12-18; and increased rates of placement in employment/apprenticeship, personal income, and participation in sport activity for youth aged 19-29

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved 09/12/2016, Community Research Ethics Office (Centre for Community Based Research

Study design

Single-arm non-randomized within-subject quasi-experimental design

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Positive Youth Development and Sport for Development approach to reduce risk of adverse health outcomes, lower educational and occupational attainment, and decreased overall quality of life as adults

Interventions

Participants aged 6-29 years old will take part in up to 2-years of self-selected participation in programming at MLSE LaunchPad, a Sport for Development facility in downtown Toronto, ON, Canada.

The intervention involves programs and wrap-around services developed by an in-house team of sport programmers, several of which have been developed collaboratively with community partner organizations with similar target demographics and intended PYD impacts. Each program falls under one of the following program pillars: Healthy Mind, Healthy Body, Ready for School, or Ready for Work.

Programs include a mix of sport plus and plus sport programs. Depending on the program and age group, activities include on-court physical activities, sports, games of low organization, sport activities designed to build sport-specific skills in tandem with a relevant life-skill and/or academic concept, gameplay, fundamental movement skills development activities, activities to teach sport-specific game knowledge, kitchen activities, nutritional education, group mentoring, talking circles, professional and personal development workshops, technical employment training, soft skills training, mock interviews and job search training. Services include nutrition supports (snack and meal programs), drop-in and registered mental health counselling, and academic support such as a homework club with adult tutors. Program and services are led by paid staff including Coaches and Youth Mentors, all with nationally-recognized credentials. Services and programs are delivered in person

Intervention Type

Other

Primary outcome(s)

1. For youth ages 6-12:

1.1. Increased physical literacy (PLAYSelf Scale)

1.2. Increased physical activity (1 week pedometer)

1.3. Increased rates of participation in sport and physical activity (self report of regular sport /physical activity participation)

2. For youth ages 13-18:

2.1. Increased life skills (Child & Youth Resilience Measure, Critical Thinking in Everyday Life Scale, Rosenberg Self-Esteem Scale, Motivation and Self-Regulation Subscale from the School Attitudes Assessment Survey, Social Competence Teen Scale, Grit Scale, Social Competence Scale for Teenagers)

2.2. Increased academic performance (self-reported school attendance, report card, self-report of highest grade/level completed), increased health behaviour (Healthy Behaviour Questionnaire, 1-week pedometer)

2.3. Increased or continued sport and physical activity participation (self-report)

For youth ages 19-29: increased employment/apprenticeship/training placements (self-report), increased personal income (self-report) and increased rate of participation in sport or physical activity (self-report)

All outcomes are also assessed through scheduled qualitative data collection.

Key secondary outcome(s)

N/A

Completion date

30/03/2020

Eligibility

Key inclusion criteria

1. Age 6-29 years

2. Registered member of MLSE LaunchPad

3. Attending programming at MLSE LaunchPad

4. Ability to speak, understand and read English

5. Physically able to participate in programming with or without the use of assistive devices

6. Recruited within 8 weeks of commencing program participation

Individual participant data (IPD) sharing plan

The datasets generated during and/or analysed during the current study are available from the corresponding author on reasonable request.

Marika Warner marika.warner@mlselaunchpad.org

Type of data: De-identified participant data including demographic data (date of birth, gender, race, annual household income), participation data (program registration and attendance) and outcome data (baseline, 6 month, 1 year and 2 year follow up assessment data which is unique for each age group but may include pedometer data, responses to self-report surveys assessing life skills, self-report of health behaviours including physical activity level, and self-report of school and job attainment including GPA and employment status)

Availability: June 30 2020-June 30 2027

Criteria for sharing: Data may be shared in future with academic research partners. Requesting parties will submit an inquiry by email to MLSE LaunchPad's Research and Evaluation team.

Assessment of requests for data access will be completed by the staff team in consultation with Board of Directors and Research Advisory Committee. Criteria to be considered include planned usage, mission/mandate of the requesting party, ability of requesting organization to safeguard and steward the data appropriately, terms of the data sharing agreement, and existing partnership with the requesting party.

Informed consent was obtained from all participants aged 13 and up and parent/guardian of all participants aged 12 and under, informed assent was obtained from all participants aged 12 and under in accordance with the study's ethics approval
