Study information

Scientific Title

Improving dementia care in African and Caribbean minority ethnic groups

Acronym

IDEMCARE

Study objectives

The aim of this study is to benefit patients and their family carers by increasing timely diagnosis of dementia in Black African and Caribbean groups and thus allowing choice, symptomatic treatment, reduce carers' depression, avoid crises, and delay care home admission.

Ethics approval required

Old ethics approval format

Ethics approval(s)

First Medical Research Ethics Committee, 31/03/2014, ref: 14/EE/0136

Study design

Randomised; Interventional; Design type: Process of Care

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Topic: Primary Care; Subtopic: Dementias and neurodegeneration (DeNDRoN); Disease: All Diseases

Interventions

Leaflet, "Getting help for forgetfulness" leaflet has been developed through focus groups and interviews with members of the Black African and Caribbean ethnic minorities. It is a psychoeducation tool aimed changing attitudes to help-seeking for memory problems.

Intervention Type

Other

Primary outcome(s)

APEND questionnaire; Timepoint(s): 2 weeks and 4 months

Key secondary outcome(s)

Not provided at time of registration

Completion date

30/04/2016

Eligibility

Key inclusion criteria

Phase 1:

1. Aged 18 or over

2. Community group members who are from Black African or Caribbean Minority Ethnic groups who have given us permission to approach their members

3. Capacity to consent to participate

Phase 2:

1. Participants of phase 1 of the study who have agreed to be approached again

2. Family people with mild dementia

3. Capacity to consent to participate

Phase 3:

1. Black African or Caribbean people who are registered with a GP

2. Aged 50 years or over

3. Able to provide consent to take part in the study
