Study information

Scientific Title

Study objectives

To evaluate the clinical impact and cost-effectiveness of strategies promoting screening at brief alcohol intervention by nurses in primary care. The hypothesis was that more intensive implementation interventions would be more effective but also more costly.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

GP practice

Study type(s)

Screening

Participant information sheet

Health condition(s) or problem(s) studied

Mental and behavioural disorders: Addiction

Interventions

Control practices - written guidance on screening and brief alcohol intervention

Trained practices - in addition to written guidance, outreach training provided

Trained and supported practices - in addition to training and guidance, two weekly support calls

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Nurse activity in terms of number of patients screened using the Alcohol Use Disorders Identification Test (AUDIT) and number of 'risk positive' drinkers receiving brief intervention.

Secondary outcome measures

Accuracy of intervention delivery.

Overall study start date

10/01/1997

Completion date

10/01/2000

Eligibility**Key inclusion criteria**

General practices with attached nurse

Participant type(s)

Patient

Age group

Not Specified

Sex

Not Specified

Target number of participants

212

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

10/01/1997

Date of final enrolment

10/01/2000

Locations**Countries of recruitment**
