Study information

Scientific Title**Study objectives**

To evaluate the clinical impact and cost-effectiveness of strategies promoting screening at brief alcohol intervention by nurses in primary care. The hypothesis was that more intensive implementation interventions would be more effective but also more costly.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Screening

Health condition(s) or problem(s) studied

Mental and behavioural disorders: Addiction

Interventions

Control practices - written guidance on screening and brief alcohol intervention

Trained practices - in addition to written guidance, outreach training provided

Trained and supported practices - in addition to training and guidance, two weekly support calls

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Nurse activity in terms of number of patients screened using the Alcohol Use Disorders Identification Test (AUDIT) and number of 'risk positive' drinkers receiving brief intervention.

Key secondary outcome(s)

Accuracy of intervention delivery.

Completion date

10/01/2000

Eligibility**Key inclusion criteria**

General practices with attached nurse

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group
