Study information

Scientific Title

Evaluation of a mobile phone-based, advanced symptom management system (ASyMS©) in the management of chemotherapy-related toxicity

Acronym

The ASyMS study

Study objectives

The hypotheses of the study are:

1. The mobile phone system will provide a more accurate reflection of chemotherapy toxicity at home
2. The mobile phone system will provide a better means of monitoring potentially dangerous toxicity, with rapid access to input from the clinical site

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved by Fife and Forth Valley Research Ethics Committee, reference number 05/S0501/81. Approval was granted in August 2006

Study design

Randomised controlled study design

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Colorectal, breast and lung cancer

Interventions

This study will evaluate the effectiveness of using a mobile phone in the home, monitoring and symptom management of patients receiving chemotherapy for colorectal cancer, lung and breast cancer. Participants in the control group receive standard care and are asked to complete a paper copy of the symptom questionnaire at designated time points throughout the study.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Changes in chemotherapy toxicity as a result of use of the mobile phone system and supporting information technology (IT) infrastructure

Key secondary outcome(s))

Symptom outcomes that will be used for future statistical power calculations

Completion date

01/11/2006

Eligibility

Key inclusion criteria

1. A diagnosis of breast, lung or colorectal cancer
2. Commencing a new course of chemotherapy treatment (defined as those patients commencing a new chemotherapy regime irrespective of stage of disease or line of treatment)
3. Receiving out-patient chemotherapy
4. Aged 18 years or over
5. Written informed consent given
6. Able to read and write English
7. Deemed by members of the clinical team as being physically and psychologically fit to participate in the study

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

Not Specified

Key exclusion criteria

1. Patients who are unable to meet the above criteria
2. Patients who do not agree to give access to their case notes

Date of first enrolment

01/12/2005

Date of final enrolment

01/11/2006
