Study information

Scientific Title

Acronym
VRRUL

Study objectives

Does virtual reality-based rehabilitation produce improved outcomes in comparison to standard physiotherapy for the upper limb

Ethics approval required

Old ethics approval format

Ethics approval(s)

Approved by the Queen's University Belfast Research Ethics Committee on 26/08/2003, reference number: 186/03

Study design

Randomised controlled study

Primary study design

Interventional

Study type(s)

Quality of life

Health condition(s) or problem(s) studied

Stroke

Interventions

Virtual reality-based upper limb exercises compared to standard assisted active exercises

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Motoricity index score

Key secondary outcome(s))

Action research arm test score

Completion date

30/04/2007

Eligibility**Key inclusion criteria**

1. First stroke
2. Mental score >6/10
3. Motoricity index score >25/100
4. Star cancellation score >47/52

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Key exclusion criteria

1. Aphasia
2. Severe arm pain
3. Cardiac pacemaker

Date of first enrolment

01/10/2005

Date of final enrolment

30/04/2007

Locations

Countries of recruitment

United Kingdom

Northern Ireland

Study participating centre
