# Study information

## Scientific Title

A randomised controlled trial to evaluate the effectiveness of peer (mother-to-mother) support for the prevention of postpartum depression

## Study objectives

Among mothers at-risk for Post-Partum Depression (PPD) (Edinburgh Postnatal Depression Scale [EPDS] score more than nine), what is the effect of peer support on PPD at 12 weeks postpartum?

## Ethics approval required

Old ethics approval format

## Ethics approval(s)

Approval received from the University of Toronto research ethics board and other participating sites in the summer of 2004.

## Study design

Randomised controlled trial

## Primary study design

Interventional

## Secondary study design

Randomised controlled trial

## Study setting(s)

Hospital

## Study type(s)

Treatment

## Participant information sheet

## Health condition(s) or problem(s) studied

Postpartum Depression

## Interventions

Mothers allocated to the peer support group will have access to all of the standard community postpartum services in addition to receiving telephone-based support from a peer volunteer (a mother who has previously experienced, and recovered from, postpartum depression and has participated in a 4-hour training session). Telephone contact will be initiated within 48 to 72 hours of trial randomisation and then as frequently as the dyad deems necessary.

## Intervention Type

Other

## Phase

Not Applicable

### **Primary outcome measure**

Postpartum Depression (PPD), as diagnosed by the Structured Clinical Interview (SCID-I) for Diagnostic and Statistical Manual of Mental Disorders, fourth edition (DSM-IV) at 12 weeks postpartum.

### **Secondary outcome measures**

1. PPD, as diagnosed by the SCID-I, at 24 weeks postpartum
2. Depressive symptomatology, as measured by the EPDS, at 12 and 24 weeks postpartum
3. Anxiety, as measured by the Spielberger State-Anxiety Inventory, at 12 and 24 weeks postpartum
4. Loneliness, as measured by the short-version University of California, Los Angeles (UCLA) Loneliness Scale, at 12 and 24 weeks postpartum
5. Health Service Utilisation, as measured by a modified version of the Health Service Utilisation and Cost of Care Questionnaire, at 12 and 24 weeks postpartum

### **Overall study start date**

01/07/2004

### **Completion date**

01/05/2007

## **Eligibility**

### **Key inclusion criteria**

1. Live birth
2. Aged 18 - 49 years old, female
2. Discharged from hospital
3. Less than two weeks postpartum
4. Scored more than nine on the EPDS
5. Availability of a peer volunteer who speaks the potential participant's language

### **Participant type(s)**

Patient

### **Age group**

Adult

### **Lower age limit**

18 Years

### **Sex**

Female

### **Target number of participants**

700

### **Key exclusion criteria**

1. Infant not discharged home with mother
2. Current use of anti-depressant or anti-psychotic medication

A prior self-reported mental illness, including prior PPD, will not be an exclusion criterion.

**Date of first enrolment**

01/07/2004

**Date of final enrolment**

01/05/2007
