Study information

Scientific Title
A randomised blind trial of care packages for patients with chronic back pain

Study objectives
What is the best method for treating patients with chronic back pain?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Single-centre randomised single-blind study

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Musculoskeletal Diseases: Chronic back pain

Interventions

1. Standard physiotherapy
2. Osteopathy
3. Exercise/rehab

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Oswestry Disability Index
2. Euroquol Questionnaire
3. Shuttle Walking Test

Key secondary outcome(s))

Not provided at time of registration

Completion date

30/10/2005

Eligibility

Key inclusion criteria

1. Patients with chronic low back pain referred to the physiotherapy service with or without leg symptoms which has been present for 3 months or more with no specific cause
2. Aged 18-65
3. Able to walk with/without the use of a stick and able to step on and off a plinth

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Upper age limit

65 years

Sex

All

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/07/1999

Date of final enrolment

30/10/2005
