Plain English summary of protocol

Background and study aims

Discrimination is a widespread problem in many areas of society. However, the extent of discrimination in medicine has not yet been extensively studied. Therefore, the goal of the study is to conduct an extensive study to get a detailed picture of discrimination in the field of medicine to serve as a first basis to make medicine more inclusive.

Who can participate?

Medical students, residents and physicians world-wide can participate.

What does the study involve?

The study involves completing a questionnaire investigating experienced discrimination in medical school and working as a doctor.

By answering the questions in this study participants can help to document experiences of discrimination in medical school and working as a doctor.

The study is conducted as an online survey. The study can be accessed from every computer with an internet connection.

What are the possible benefits and risks of participating?

No benefits. The risks include bringing back stressful memories about experienced discrimination.

Where is the study run from?

University Hospital of Cologne (Germany)

When is the study starting and how long is it expected to run for?

Who is funding the study?

Investigator initiated and funded

Who is the main contact?

Dr. med. Rabi Raj Datta, rabi.datta@uk-koeln.de

Health condition(s) or problem(s) studied

Survey on discrimination experienced by medical students and physicians

Interventions

A questionnaire discussing discrimination experienced by medical students and doctors will be conducted.

Participants taking part in the study will receive a link to the online survey. They can then click on the link and complete the online survey, which takes about 30 minutes to complete. The total duration of observation is limited to the online survey. There is no follow-up.

Intervention Type

Behavioural

Primary outcome measure

The extent of discrimination as measured by the novel questionnaire at a single time point

Secondary outcome measures

Measures suggested to improve discrimination measured using the novel questionnaire at a single time point

Overall study start date

01/01/2020

Completion date

01/05/2022

Eligibility

Key inclusion criteria

1. Medical students
2. Medical residents
3. Medical doctors

Participant type(s)

Health professional

Age group

Adult

Sex

Both

Target number of participants

500 - 1,000

Key exclusion criteria

Does not meet inclusion criteria

Date of first enrolment

01/04/2021

Date of final enrolment

01/04/2022

Locations**Countries of recruitment**

Brazil

China

France

Germany

Italy

Poland

Portugal

Romania

South Africa

United Kingdom

United States of America
