### Study information

#### Scientific Title

Intrahospital first medical contact (iFMC) to electrocardiogram (ECG): a randomised, controlled, interventional study on an organisational level

#### **Study objectives**

Intrahospital first medical contact (iFMC) to electrocardiogram (ECG) time is influenced by implementing structural changes.

**Ethics approval required** Old ethics approval format

**Ethics approval(s)** Ethics Committee of the Medical University of Vienna approved on the 10th August 2010

Study design

Randomised controlled interventional trial

**Primary study design** Interventional

**Secondary study design** Randomised controlled trial

**Study setting(s)** Hospital

**Study type(s)** Treatment

#### Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

#### Health condition(s) or problem(s) studied

Acute myocardial infarction

#### Interventions

The intervention is the availability of a dedicated ECG technician. In the control group no ECG technician is available. The availability of the ECG technician is randomised. There are three 8-hour ECG technician shifts per day. The shifts (morning, day, night) are equally distributed. The ECG technician rota is concealed. Clinical staff is informed about availability of ECG technician by an alert sign at triage and registration counter. If available the ECG technician is alerted by phone. Study period is set for four weeks.

Intervention Type

Other

Phase

Not Applicable

#### Primary outcome measure

Time from arrival to ECG, defined as presentation to triage, which is called intrahospital first medical contact (iFMC). This timepoint is noted on the triagesheet by nursing staff.

#### Secondary outcome measures

- 1. Number of ECGs
- 2. Staff satisfaction
- 3. Feasibility, measured by a questionnaire

Overall study start date 23/08/2010

Completion date 23/09/2010

# Eligibility

#### Key inclusion criteria

All patients (adults, either sex) receiving an ECG recording at the out-patient clinic of the Emergency Department (ED) at the Medical University of Vienna (MUW).

Participant type(s) Patient

**Age group** Adult

**Sex** Both

**Target number of participants** 800

#### Key exclusion criteria

 All patients diagnosed to have myocardial infarction transferred to CathLab by Emergency Medical Services (EMS)
All patients bypassing triage for different reasons

### Date of first enrolment

23/08/2010

Date of final enrolment 23/09/2010

### Locations

**Countries of recruitment** Austria **Study participating centre Waehringerguertel 18-20** Vienna Austria 1090

### Sponsor information

**Organisation** Medical University of Vienna (Austria)

#### Sponsor details

c/o Associate Professor Harald Herkner, MD, MSc Clinical Epidemiologist Department of Emergency Medicine Waehringer Guertel 18-20 Vienna Austria 1090

**Sponsor type** Hospital/treatment centre
