Study information

Scientific Title

Study objectives

Does nurse education improve knowledge and attitude towards patients with cognitive impairment on medical and surgical wards?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Clustered randomised controlled trial with a crossover

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Nervous System Diseases: Cognitive disorders

Interventions

The intervention is an education programme comprising of workshops to improve verbal and non-verbal communication skills, valuing independence and respecting personhood which is combined with routine clinical advice from the liaison service. This is compared to a non intervention group which will receive routine clinical advice from the liaison service only.

As of 04/10/2011 this trial has stopped due to a transfer of staff between intervention and control wards.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Knowledge and attitudes of general nurses

Key secondary outcome(s))

Not provided at time of registration

Completion date

31/10/2005

Reason abandoned (if study stopped)

Lack of staff

Eligibility

Key inclusion criteria

Daytime group of nursing staff on 4 acute wards - 2 medical and 2 surgical.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

The study is being conducted on four inpatient acute wards and the only exclusion criteria is refusal of consent to participate.

Date of first enrolment

01/10/2004

Date of final enrolment
