Participant information sheet

Health condition(s) or problem(s) studied

Signs and Symptoms: Speech

Interventions

In each centre, all the children will complete both the live and automated voice versions of the toy tests. The order in which the 2 tests are completed will be randomised.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

Better understanding of the Clinical Test which is an essential part of normal audiological assessment above the mental age of 2 years.

Secondary outcome measures

Not provided at time of registration

Overall study start date

04/11/2004

Completion date

03/11/2005

Eligibility

Key inclusion criteria

Maximum of 100 children between 2-4 years. Inclusion criteria:

- 1. Age 2-4 years (two groups: 2-3 years Free field audiometry will be used. 3-4 years Pure tone audiometry) will be used
- 2. Normal Hearing Pure tone Audiometry: below 25dBHL, Free field Audiometry: below 30dBA
- 3. Tympanometry Type A
- 4. English must be the first language
