Study information

Scientific Title

Study objectives

Validity of the internal jugular vein compression test to confirm correct placement of the epidural catheter.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Pregnancy and Childbirth: Anaesthesia

Interventions

Patient volunteers, Single Centre Prospective, Observational Single-blind, Randomised. Chi Squared test constructing a two by two table to input the data.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

Time interval after completion of the third stage of labour

Key secondary outcome(s)

Total duration of the epidural Infusion. Patient weight. Depth of epidural space. Length of catheter in the epidural space.

Completion date

01/10/2003

Eligibility**Key inclusion criteria**

20 volunteers, post-partum women who have received an epidural for pain relief in labour.

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Female

Key exclusion criteria

Not provided at time of registration

Date of first enrolment

01/01/2003

Date of final enrolment

01/10/2003
