Study information

Scientific Title

Randomized phase III trial: a decision aid in cardiovascular prevention - risk consultation related to absolute and relative risk

Acronym

ARRIBA

Study objectives

A consultation based on ARRIBA leads to:

1. An improved quality of counselling (patient's perceived assessment scale)
2. Changes in prescribing behaviour based on risk status

Ethics approval required

Old ethics approval format

Ethics approval(s)

Ethical Committee of the University of Marburg, 18/10/2004, ref: 134/04

Study design

Two-arm parallel controlled cluster randomized intervention study

Primary study design

Interventional

Secondary study design

Cluster randomised trial

Study setting(s)

Not specified

Study type(s)

Quality of life

Participant information sheet

Health condition(s) or problem(s) studied

Cardiovascular disease

Interventions

1. Intervention:

- a. Advanced training (continuing education) in shared decision-making, risk calculation, risk communication and the use of decision aids
- b. Advanced training in ARRIBA (decision aid and consultation)

2. Control:

Controls receive training after termination of the study

Intervention Type

Other

Phase

Phase III

Primary outcome measure

Patient's attitude towards consultation (patient's perceived assessment scale)

Secondary outcome measures

1. GPs: changes in prescribing behaviour and consultation related to risk status
2. Patients: cardiovascular risk status after six months

Overall study start date

01/11/2004

Completion date

31/10/2006

Eligibility**Key inclusion criteria**

1. Age >18 years
2. Written informed consent
3. Measurement of cholesterol

Participant type(s)

Patient

Age group

Adult

Lower age limit

18 Years

Sex

Both

Target number of participants

1100

Key exclusion criteria

Insufficient mental or verbal ability

Date of first enrolment

01/11/2004

Date of final enrolment

31/10/2006
