## **Study information**

### **Scientific Title**

Randomised controlled trial of Narrow Band imaging with magnification (NBI) versus white light endoscopy for dysplasia detection in ulcerative colitis surveillance

### **Study objectives**

Does a new colonoscopic viewing technique called narrow band imaging (NBI) help doctors detect more patients with at least pre-cancerous area (dysplasia associated lesion or mass, DALMs) than conventional colonoscopy using white light alone?

### **Ethics approval required**

Old ethics approval format

### **Ethics approval(s)**

Added 17 July 2008: approval granted by Harrow Research Ethics Committee REC 06/Q0408/10

### **Study design**

Randomised controlled trial

### **Primary study design**

Interventional

### **Secondary study design**

Randomised controlled trial

### **Study setting(s)**

Not specified

### **Study type(s)**

Diagnostic

### **Participant information sheet**

Not available in web format; for printed version please contact the investigators at the address below

### **Health condition(s) or problem(s) studied**

Digestive System: Ulcerative colitis

### **Interventions**

Categorical data will be compared with chi-squared test, t-testing on Mann-Whitney U test will be used for continuous data depending on normality.

### **Intervention Type**

Other

**Phase**

Not Specified

**Primary outcome measure**

The study is to determine if the use of a narrow band of light can help detect more pre-cancerous or cancerous areas than the normal white light used for detection. The outcome measure is to determine the numbers of patients with at least one cancer in either group.

**Secondary outcome measures**

Added 17 July 2008:

1. Are more precancerous lesions found in total with NBI?
2. Are more advanced precancerous lesions found with NBI?
3. Are more patients found with more than one precancerous lesion with NBI?
4. How many lesions are successfully completely removed with endoscope?

**Overall study start date**

01/03/2006

**Completion date**

31/12/2008

**Eligibility****Key inclusion criteria**

1. Patients with longstanding extensive colitis, with evidence of microscopic inflammation at a previous colonoscopy
2. Patients over 18

**Participant type(s)**

Patient

**Age group**

Adult

**Lower age limit**

18 Years

**Sex**

Not Specified

**Target number of participants**

110 patients will be needed for each group, 220 in total

**Key exclusion criteria**

Pre-intubation:

1. Pregnant patients
2. Severe active colitis
3. Those unwilling or unable to give consent

Pre-randomisation:

1. Those with poor bowel preparations
2. Unable to reach caecum due to stricture

**Date of first enrolment**

01/03/2006

**Date of final enrolment**

31/12/2008

## Locations

**Countries of recruitment**

England

United Kingdom

**Study participating centre**
