Study information

Scientific Title

Study objectives

Can intubating one canaliculus be as effective as intubating two for DCR surgery?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Not specified

Study type(s)

Not Specified

Participant information sheet**Health condition(s) or problem(s) studied**

Surgery: Dacryocystorhinostomy (DCR)

Interventions

Mono versus Bicanular Intubation

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome measure

Objective and subjective assessment of tear flow drainage

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/02/2006

Completion date

31/08/2006

Eligibility

Key inclusion criteria

Adult patients with chronic eye watering requiring a dacryocystorhinostomy (DCR), with no other pathology.

Participant type(s)

Patient

Age group

Adult

Sex

Not Specified

Target number of participants

60

Key exclusion criteria

Patients with complicated anatomy, surgery or pathology suggesting poor surgical operation.

Date of first enrolment

01/02/2006

Date of final enrolment

31/08/2006

Locations

Countries of recruitment

England

United Kingdom

Study participating centre
