Study information

Scientific Title

Preventive Angioplasty in Myocardial Infarction Trial: a randomised controlled trial

Acronym

PRAMI

Study objectives

A randomised trial among patients with an acute myocardial infarction (AMI) undergoing a therapeutic angioplasty (a procedure to unblock the artery causing the AMI), to determine the value of preventive angioplasty (additional angioplasty to dilate all other narrowed coronary arteries that were not the cause of the AMI but may cause a future infarct) undertaken as an immediate follow-on procedure.

Ethics approval required

Old ethics approval format

Ethics approval(s)

East London and the City Research Ethics Committee approved in December 2007

Study design

Randomised controlled trial

Primary study design

Participant information sheet

Not available in web format, please use the contact details below to request a patient information sheet

Health condition(s) or problem(s) studied

Coronary artery disease

Interventions

Six hundred patients with AMI will be allocated at random to receive therapeutic angioplasty alone or therapeutic angioplasty plus preventive angioplasty undertaken as an immediate follow-on procedure. Patients will be followed up for an average of 3 years.

Intervention Type

Other

Phase

Not Applicable

Primary outcome measure

All outcomes will be recorded during the period of follow up and analysed 1 year after the last patient is recruited:

- 1. Death
- 2. Non-fatal MI
- 3. Refractory angina

Secondary outcome measures

All outcomes will be recorded during the period of follow up and analysed 1 year after the last patient is recruited:

- 1. Repeat revascularisation
- 2. Complications of angioplasty
- 3. Angina score
- 4. EQ510
- 5. Economic evaluation

Overall study start date

14/04/2008

Completion date

14/04/2012

Eligibility

Key inclusion criteria

Patients (no age limits, either sex) with acute myocardial infarction undergoing a therapeutic angioplasty to the infarct related artery

Participant type(s)

Patient

Age group

Other

Sex

Both

Target number of participants

600

Key exclusion criteria

- 1. Cardiogenic shock
- 2. Coronary artery bypass graft (CABG)

Date of first enrolment

14/04/2008

Date of final enrolment

14/04/2012
