Study information

Scientific Title

Returning to work after childbirth: the effectiveness of the first contact by an executive with an employee during maternity leave on sick leave and work disability postpartum

Acronym

Mom@Work

Study objectives

Many women experience health problems during the first year after childbirth.

Common postpartum problems are fatigue, disturbed sleep, postpartum depression, back and pelvic pain. Those problems are often perceived as being unavoidable and 'all in the game'. However, frequently these problems lead to limitations in daily activities and to sick leave. In the Netherlands sick leave is higher during pregnancy and the first period postpartum than during other periods. About 30% of the women were absent from work due to health problems after maternity leave in 2002.

In the Netherlands, there is no contact with an occupational physician during maternity leave, not even when women experience health problems. Furthermore, women often wait for seeking medical care for their problems, frequently until their maternity leave is almost over. Therefore, the complaints may have existed for a considerable time before an intervention starts, while early intervention after complaints seems to be important for a good prognosis.

The aim of this study is to evaluate the effectiveness of an early consultation by an executive with an employee during maternity leave on health problems and sick leave, and to assess which factors contribute to return-to-work after maternity leave.

Interventions

The women in the intervention group will be consulted 6 weeks postpartum during maternity leave by their executive, and in some cases by a case manager or a staff member of the personnel department. This executive will phone, or visit the women. Prior to this consultation the executive receives an information package. He or she will be instructed carefully to ask questions about the women's well-being, complaints, and return to work. They have to use a checklist when doing this consultation.

When a woman has the expectation that she will not return to work after maternity leave due to medical complaints, she will have the possibility to receive a consultation by a staff member of the Occupational Health Services (OHS). The executive will phone the OHS in case of need for

medical intervention (or will follow the standard sick-listed procedure of the company). The OHS will call the woman to make an appointment within one week with an occupational physician or other consultant.

When a woman has no complaints and/or expects no problem to return-to-work, the executive will do nothing. When a woman has doubts or is uncertain if she is able to return-to-work, the executive will call again after 2 weeks. The executive uses the same checklist again.

Intervention Type

Other

Phase

Not Applicable

Primary outcome(s)

1. Sick leave (during pregnancy and after maternity leave; duration and frequency)
2. Costs (of the intervention, medical consumption, sick leave)
3. Stop working

Key secondary outcome(s)

1. Health status/quality of life
2. Complaints (pregnancy-related pelvic and back pain, fatigue and depressive complaints (postpartum depression, distress))
3. Satisfaction with intervention
4. Adaptation of working hours or work tasks

Completion date

01/06/2007

Eligibility**Key inclusion criteria**

1. Voluntary participation (giving informed consent)
2. Age: between 18 and 45 years
3. Pregnant less than 32 weeks
4. Being employed before and after maternity leave, for a minimum of 12 hours per week
5. Good reading, writing and understanding of the Dutch language

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Lower age limit

18 years

Sex

Female

Key exclusion criteria

1. Delivery before 34 weeks of pregnancy
2. Definitely not returning to work after delivery, meaning one has submitted ones resignation, or end of contract
3. Not returning to the same employer
4. Receiving a disability benefit or having submitted an application for a disability benefit

Date of first enrolment

01/01/2004

Date of final enrolment

01/06/2007
