Study information

Scientific Title

European/Australasian Stroke Prevention in Reversible Ischaemia Trial: ESPIRIT

Acronym

ESPRIT

Study objectives

Results of trials of aspirin and dipyridamole combined versus aspirin alone for the secondary prevention of vascular events after ischaemic stroke of presumed arterial origin are inconsistent. The aim of the study is to resolve this uncertainty.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Ischaemia

Interventions

Secondary prevention after transient ischaemic attack or non-disabling ischaemic stroke.

Three treatment strategies:

- 1. Oral anticoagulation (international normalised ratio [INR] 2.0-3.0)
- 2. The combination of aspirin (acetylsalicylic acid [ASA]) (in any dose between 30 mg and 325 mg daily) and dipyridamole (400 mg daily)
- 3. ASA (in any dose between 30 mg and 325 mg daily)

Intervention Type

Drug

Phase

Not Specified

Drug/device/biological/vaccine name(s)

Aspirin, dipyridamole

Primary outcome(s)

Composite of death from all vascular causes, non-fatal stroke, non-fatal myocardial infarction, or major bleeding complication, whichever happened first.

Key secondary outcome(s))

- 1. Death from all causes
- 2. Death from vascular causes
- 3. Death from vascular causes or nonfatal stroke
- 4. Fatal or nonfatal stroke
- 5. Death from vascular causes, nonfatal stroke, nonfatal myocardial infarction or vascular intervention
- 6. Major bleeding complications
- 7. Amputations of lower extremities
- 8. Retinal infarction or bleeding

Completion date

01/12/2006

Eligibility

Key inclusion criteria

- 1. Patients presenting in the participating hospitals with a transient ischaemic attack (TIA) or non-disabling stroke of atherosclerotic origin
- 2. Randomisation within 6 months after the TIA or minor stroke
- 3. Modified Rankin scale of 3 or less

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

Αll

Key exclusion criteria

- 1. (Contra)indication to, or intolerance to, anticoagulants, dipyridamole, or aspirin
- 2. Disease expected to cause death within weeks or months
- 3. Source of embolism in the heart
- 4. Moderate or severe ischemic damage to the white matter of the brain (leukoaraiosis)
- 5. Anemia, polycythemia, thrombocytosis, or thrombocytopenia
- 6. Planned carotid endarterectomy
- 7. Intracranial bleeding or cerebral tumour
- 8. TIA or stroke caused by vasculitis, migraine, or dissection
- 9. Severe hypertension
- 10. Liver failure
- 11. Pregnancy
- 12. Chronic alcohol abuse

Date of first enrolment

01/07/1997

Date of final enrolment

01/12/2006
