Study information

Scientific Title

Study objectives

What is the patients' perception of the barrier to kneeling post operatively? Is there a relationship between the scar position and kneeling ability? What anatomical structure is knelt on post operatively? Can a one-off physiotherapy intervention improve patients' kneeling ability?

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Surgery: Knee replacement

Interventions

Post operative follow up patients who agree to take part within the study will complete a questionnaire about kneeling at 6 weeks post op and 12 months post op.
Half will receive the intervention at 6 weeks. The intervention is advice on kneeling techniques. The other half will receive the intervention at 12 months and the results will be compared.

Intervention Type

Procedure/Surgery

Phase

Not Specified

Primary outcome(s)

Change in kneeling questionnaire and in Oxford knee score.

Key secondary outcome(s))

Not provided at time of registration

Completion date

31/08/2005
