Protocol serial number G0200583

Study information

Scientific Title

Acronym

VITATOPS

Study objectives

To determine whether the addition of vitamin supplement (folate 2 mg, B6 25 mg, B12 500 µg) to best medical/surgical management (including modification of risk factors) will reduce the combined incidence of recurrent vascular events (stroke, myocardial infraction) and vascular death in patients with recent stroke or transient ischaemic attach (TIA).

Secondary objectives:

- 1. To determine whether the addition of vitamin supplements (folate 2 mg, B6 25 mg, B12 500 µg) will reduce:
- a) The incidence of revascularisation procedures of the coronary, cerebral and peripheral circulations
- b) Incidence of dementia and depression in patient with recent stroke or TIA
- c) Occurrence of TIA in patients with recent stroke or TIA
- 2. To determine whether the effect of adding vitamin supplements (folate 2 mg, B6 25 mg, B12 500 µg) on the incidence of the primary outcome event (stroke, MI or vascular death) is consistent in patient subgroups such as those of different ethnicity and genotype.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Multicentre randomised double-blind placebo-controlled clinical

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Cardiovascular

Interventions

Multivitamins folate 2 mg, B6 25 mg, B12 500 μg or placebo

Intervention Type

Supplement

Phase

Not Specified

Drug/device/biological/vaccine name(s)

Multivitamins folate, B6, B12

Primary outcome(s)

The primary outcome event is the composite event 'stroke, myocardial infarction, or death from any vascular cause', whichever occurs first.

Key secondary outcome(s))

Secondary outcome measures include TIA, depression, dementia, unstable angina, revascularisation procedures of the coronary, cerebral and peripheral circulations.

Completion date

31/07/2010

Eligibility

Key inclusion criteria

All patients presenting to one of the participating neurologists or general physicians within 7 months of stroke (ischaemic or haemorrhagic) or transient ischemic attack (TIA) (eye or brain) are eligible for this trial.

In addition the patient must:

- 1. Agree to take study medications
- 2. Be geographically accessible for follow up
- 3. Provide written informed consent

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Not Specified

Sex

Not Specified

Key exclusion criteria

- 1. Taking folate or vitamin B6, on medical advice
- 2. Use of vitamin supplements containing B6, B12 or Folate (unless patient agrees to take study medication instead of the vitamin supplements which they usually take)

- 3. Taking Methotrexate for any reason
- 4. Pregnancy or women of child-bearing potential who are at risk of pregnancy
- 5. Limited life expectancy
