## Additional identifiers

### Protocol serial number

N0176079528

## Study information

## Scientific Title

### Study objectives

Is the risk of a recurrent infection reduced by performing a line change on a peritoneal dialysis (PD) patient when patients present with peritonitis?

### Ethics approval required

Old ethics approval format

### Ethics approval(s)

Not provided at time of registration

### Study design

Randomised controlled trial

### Primary study design

Interventional

### Study type(s)

Not Specified

### Health condition(s) or problem(s) studied

Infections and Infestations: Peritonitis

### Interventions

Antibiotics and no line change compared to antibiotics and a line change

### Intervention Type

Other

### Phase

Not Applicable

### Primary outcome(s)

To evaluate whether recurrence of peritonitis is more common in patients who present with peritonitis and receive antibiotics and no line change compared to patients who receive antibiotics and a line change.

### Key secondary outcome(s)

Not provided at time of registration

### Completion date

01/06/2003

## Eligibility

### Key inclusion criteria

Not provided at time of registration

**Participant type(s)**

Patient

**Healthy volunteers allowed**

No

**Age group**

Not Specified

**Sex**

Not Specified

**Key exclusion criteria**

Not provided at time of registration

**Date of first enrolment**

01/06/2000

**Date of final enrolment**

01/06/2003
