Study information

Scientific Title

PRIMUS 001: An adaptive phase II study of FOLFOX-A (FOLFOX and nab-paclitaxel) versus AG (nab-paclitaxel and gemcitabine) in patients with metastatic pancreatic cancer, with integrated biomarker evaluation

Acronym

PRIMUS 001

Study objectives

That FOLFOX-A will increase progression free survival in metastatic pancreatic cancer patients over AG

Ethics approval required

Ethics approval required

Ethics approval(s)

approved 03/08/2017, West of Scotland REC (Dykebar Hospital, Glasgow, PA2 7DE, United Kingdom; +44 141 314 0211; Ruth.Hood2@ggc.scot.nhs.uk), ref: 17/WS/0142

Study design

Multi-centre randomised open label two arm phase II trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Metastatic pancreatic cancer

Interventions

Patients will call the CTU to randomise the patients and they will be randomised on a 1:1 basis with 50% receiving AG and 50% FOLFOX-A. Minimisation will be used to allocate patients between the treatment arms, the following factors will be used: treatment centre, whether or not the patient has liver metastasis, whether the primary tumour is in the head or the tail of the pancreas and the patients baseline CA19.9.

FOLFOX-A (nab-paclitaxel 150mg/m2 IV over 30 minutes, day 1 (administered first), Oxaliplatin: 85mg/m2, IV over 2 hours, day 1, Folinic acid: 350 mg flat dose or 400mg/m2, IV over 2 hours, day 1 (as per standard of care for folinic acid dosing), 5-FU infusion:1200mg/m2/day, as a continuous IV infusion over 2 days, day 1 and day 2 (for a total dose of 2400mg/m2 over 46 hours.)

OR

AG (nab-paclitaxel: 125 mg/m2 IV over 30 minutes, day 1,8, and 15 (administered first and Gemcitabine 1000 mg/m2 IV over 30 mins on days 1, 8, and 15 (immediately following nab-paclitaxel).

When the patient progressed on CT scan treatment will stop and the end of treatment visit will take place with 28 days of the last treatment. At this visit any con meds will be reviewed, physical exam (weight, BP, pulse), ECOG, blood count and biochemistry, assessment of adverse events, CA19.9 and quality of life.

After that patients will be followed up every 3 months for the first year post randomisation, 18 months after randomisation, 24 months and then annually for up to 5 years. At these visits con meds, including any new cancer treatments will be recorded, ECOG, CA19.9, quality of life assessments and survival status will be recorded.

Intervention Type

Drug

Phase

Phase II

Drug/device/biological/vaccine name(s)

Nab-paclitaxel, gemcitabine, oxaliplatin, folinic acid, 5-fluorouracil

Primary outcome(s)

Progression free survival as measured by IV contrast enhanced CT scan every 8 weeks from the date of randomisation to progression or death (from any cause), whichever occurs first.

Key secondary outcome(s))

- 1. Objective response rate based on RECIST v1.1 will be measured by contrast enchanged CT scan every 8 weeks until disease progression
- 2. Overall survival will be recorded at each study visit up to 60 months post randomisation
- 3. Safety and tolerability will be assessed using NCI-CTCAE v4. Adverse events will be collected at each treatment visit and the end of treatment visit.
- 4. Quality of life will be assessed using EORTC QLQ-C30, QLQ PAN26, ED-5D-5L monthly while on treatment and then at each follow up visit
- 5. Peripheral neuropathy will be assessed by the GOG-NTX4 questionnaire monthly while on treatment and then at each follow up visit
- 6. Health Economics: Resource use will be assessed by the EQ-5d-5L monthly while on treatment and then at each follow up visit. Information will also be collected regarding any inpatients stays in hospital during the course of the study

Completion date

31/07/2025

Eligibility

Key inclusion criteria

- 1. Patient has been enrolled in the Precision Panc Master Protocol and their tissue has been deemed suitable for NGS analysis
- 2. Patient has provided signed information consent for the PRIMUS 001 study
- 3. Age 16 years and over
- 4. Histologically-confirmed metastatic pancreatic ductal adenocarcinoma and its varients, with measurable metastatic lesion(s) according to RECIST 1.1.
- 5. Eastern Cooperative Oncology Group (ECOG) 0-1 with life expectation of no less than 12 weeks.
- 6. Patients must have received no previous chemotherapy or investigational therapy for the treatment of metastatic disease. Prior treatment with a fluoropyrimidine and/or gemcitabine administered in the adjuvant setting is allowed, provided at least 6 months have elapsed since completion of the last dose and no ongoing toxicities are present.
- 7. Adequate liver/bone marrow function as defined by:
- 7.1. Neutrophils (ANC) \geq 1.5 x 109/l
- 7.2. Platelets $\ge 100 \times 109/l$
- 7.3. Haemoglobin $\geq 9.0 \text{ g/dL}$
- 7.4. WBC \geq 3 x 109/l
- 7.5. Total bilirubin \leq 1.5 x institutional ULN unless bilirubin rise is due to Gilbert's syndrome
- 7.6. Aspartate transaminase (AST) and alanine aminotransferase (ALT) \leq 2.5 x ULN (and <5 ULN in the presence of liver metastases)
- 7.7. Estimated creatinine clearance ≥ 60 mL/min (as calculated by Cockcroft and Gault or Wright formula or measured by EDTA clearance)
- 8. Negative serum Human Chorionic Gonadotropin (HCG) test for females with child bearing potential. Postmenopausal women must have been amenorrhoeic for at least 12 months to be considered of non-childbearing potential
- 9. Woman of child bearing potential, and men with female partners of child bearing potential, must agree to use adequate contraceptive measures (see section 8.1.8.1) for the duration of the study and for up to 6 months after the completion of study treatment.
- 10. Compliant, and can be followed up regularly

The following additional inclusion criteria is ONLY required if recommended by the independent Data Monitoring Committee after interim review of study data (sites will have been informed by the CRUK CTU if this is the case):

11. Patient must be biomarker positive as fed back after central Precision-PANC diagnostic testing

Participant type(s)

Patient

Healthy volunteers allowed

No

Kev exclusion criteria

Current exclusion criteria as of 12/03/2024:

- 1. Prior treatment with nab-paclitaxel or oxaliplatin
- 2. Prior chemotherapy for metastatic pancreatic cancer
- 3. Known hypersensitivity for any component of any study drug
- 4. Active infection including Herpes Zoster and chickenpox
- 5. Current neuropathy \geq grade 2
- 6. Uncontrolled brain metastatsis or mental illness
- 7. Uncontrolled congestive heart failure (CHF), or history of myocardial ischemia (MI), unstable angina, stroke, or transient ischemia within previous 6 months.
- 8. Uncontrolled serious contraindicated medical condition or illness
- 9. Known or suspected dihydropyrimidine (DPD) deficiency
- 10. Pregnant of breastfeeding
- 11. History of physical or psychiatric disorder that would prevent informed consent and compliance with protocol
- 12. Administration of any investigational drug within 28 days or 5 half-lives, whichever is longer, of receiving the first dose of trial treatment
- 13. Any systemic anti-cancer therapy, or major surgery within 28 days of randomisation
- 14. Any minor surgery or radiotherapy within 7 days of randomisation
- 15. Any psychological, familial, sociological or geographical consideration potentially hampering compliance with the trial protocol and follow up schedule.
- 16. Any patients receiving treatment with brivudin, sorivudin and analogues
- 17. History of another malignancy in the last 3 years (other than treated squamous/basal cell skin cancer, treated early-stage cervical cancer or treated/biochemically-stable, organ-confined prostate cancer)
- 19. Any patient with severe diarrhoea (defined as ≥grade 3 diarrhoea despite maximum supportive measures and exclusion of underlying infection

Previous exclusion criteria:

- 1. Prior treatment with nab-paclitaxel or oxaliplatin
- 2. Prior chemotherapy for metastatic pancreatic cancer
- 3. Known hypersensitivity for any component of any study drug
- 4. Active infection including Herpes Zoster and chickenpox
- 5. Current neuropathy \geq grade 2
- 6. Uncontrolled brain metastatsis or mental illness
- 7. Uncontrolled congestive heart failure (CHF), or history of myocardial ischemia (MI), unstable angina, stroke, or transient ischemia within previous 6 months.
- 8. Uncontrolled serious contraindicated medical condition or illness
- 9. Known or suspected dihydropyrimidine (DPD) deficiency
- 10. Pregnant of breastfeeding
- 11. History of physical or psychiatric disorder that would prevent informed consent and compliance with protocol
- 12. Administration of any investigational drug within 28 days or 5 half-lives, whichever is longer, of receiving the first dose of trial treatment
- 13. Any systemic anti-cancer therapy, or major surgery within 28 days of randomisation
- 14. Any minor surgery or radiotherapy within 7 days of randomisation
- 15. Any psychological, familial, sociological or geographical consideration potentially hampering compliance with the trial protocol and follow up schedule.
- 16. Any patients receiving treatment with brivudin, sorivudin and analogues
- 17. History of another malignancy in the last 5 years (other than treated squamous/basal cell skin cancer, treated early-stage cervical cancer or treated/bio
- 18. Chemically-stable, organ-confined prostate cancer)
- 19. Any patient with severe diarrhoea (defined as ≥grade 3 diarrhoea despite maximum supportive measures and exclusion of underlying infection
