Study information

Scientific Title
Supplementary Study for Patients With Invasive Fungal Infection, Entered Into AML 11, AML 12 and UKALL XII or Their Successors

Study objectives

To assess the effect of GM-CSF on the outcome of fungal infection after treatment for leukaemia

Ethics approval required

Old ethics approval format

Ethics approval(s)

Not provided at time of registration

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Not Specified

Health condition(s) or problem(s) studied

Leukaemia (acute)

Interventions

1. Arm A: Placebo given by subcutaneous injection plus liposomal amphoterecin (AmBisome) at a dose of 3 mg/Kg per day by intravenous infusion for those with proven infection and 1 mg/Kg per day by intravenous infusion for those with suspected infection.

2. Arm B: GM-CSF at an initial dose of 5 µg/Kg/day by subcutaneous injection plus liposomal amphoterecin (AmBisome) at an initial dose of 3 mg/Kg/day by intravenous infusion for those with proven infection and 1 mg/Kg/day by intravenous infusion for those with suspected infection.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

1. Resolution of fever
2. Resolution of radiological and microbiological signs of infection

Key secondary outcome(s))

Not provided at time of registration

Completion date

30/06/1997

Eligibility**Key inclusion criteria**

1. Patients entered into the MRC trials AML 11, AML 12, or UKALL XII, or their successors
2. The following classification of fungal infection in leukaemia patients eligible for this trial are
 - a. Pulmonary fungal infection - proven or suspected
 - b. Sinus infected - proven or suspected
 - c. Fungemia - suspected
 - d. Chronic hepatosplenic candidosis - proven by Computed Tomography (CT)/Magnetic Resonance Imaging (MRI)
 - e. Invasive cutaneous infection - proven
 - f. Cerebral fungal infection - proven or suspected
3. Karnofsky performance status of at least 30%
4. Patients with known intolerance to either test drug are excluded
5. Previous use of AmBisome within 2 weeks, or use of granulocyte-macrophage colony-stimulating factor (GM-CSF) within 3 months excludes a patient
6. Life expectancy of >6 weeks
7. Aged >15 years

Participant type(s)
