Study information

Scientific Title

Added 01/09/09: A randomised controlled trial on the effectiveness of a group training programme aimed at increasing self-efficacy and job retention in chronically ill employees.

Study objectives

It is hypothesised that participation in the training programme aimed at increasing self-efficacy, establishing work adjustments and improving quality of work will result in better job retention and fewer sick leave days.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Received from local medical ethics committee

Study design

Randomised single blind active controlled parallel group trial

Primary study design

Interventional

Secondary study design

Randomised controlled trial

Study setting(s)

Phase

Not Specified

Primary outcome measure

Job retention and sick leave days.

Secondary outcome measures

Self-efficacy, work adjustments, quality of work including work stress and fatigue.

Overall study start date

01/04/2006

Completion date

01/04/2009

Eligibility

Key inclusion criteria

1. Chronic somatic disease
2. Paid employment
3. Experiencing problems at work
4. Motivation for active involvement
5. Knowledge of Dutch language

Participant type(s)

Patient

Age group

Adult

Sex

Both

Target number of participants

100

Key exclusion criteria

1. Psychiatric illness
2. Unexplained symptoms

Date of first enrolment
