Study information

Scientific Title

Study objectives
Pimecrolimus 1% cream improves facial seborrheic dermatitis better than hydrocortisone 1% cream

Ethics approval required
Old ethics approval format

Ethics approval(s)
Not provided at time of registration

Study design
Randomised controlled trial

Primary study design
Interventional

Study type(s)
Treatment

Health condition(s) or problem(s) studied
Seborrheic dermatitis

Interventions
Group 1: pimecrolimus 1% cream applied twice daily for 2 weeks
Group 2: hydrocortisone acetate 1% cream applied twice daily for 2 weeks

Intervention Type
Drug

Phase
Not Specified

Drug/device/biological/vaccine name(s)
Pimecrolimus, hydrocortisone

Primary outcome(s)
1. Clinical response (erythema, pruritis, scaling) at 2, 4 and 6 weeks after treatment
2. Patient's general perception about treatment result
3. Adverse events in each treatment group

Key secondary outcome(s))
Not provided at time of registration

Completion date
31/07/2005

Eligibility

Key inclusion criteria
Patients with facial seborrheic dermatitis older than 8 years.

Participant type(s)
Patient

Healthy volunteers allowed
No

Age group
Child

Lower age limit
8 years

Sex
All

Key exclusion criteria
1. Presence of active malignancy on the facial lesion
2. Presence of any kind of active viral skin disease on the facial lesion
3. Use of oral steroids in the past two weeks
4. Use of psoralen plus ultraviolet A (PUVA), ultraviolet B (UVB), ultraviolet A (UVA), azathioprine or cyclosporin in past month
5. Application of any topical treatment in past week
6. Use of any systemic antibiotics or antifungals in past 2 weeks
7. Attending in any other research study

Date of first enrolment
20/01/2005

Date of final enrolment
31/07/2005

Locations

Countries of recruitment
Iran
