Study information

Scientific Title

Study objectives

We tested the efficacy of two brief interventions, education and psychological debriefing, designed to prevent adverse psychological reactions to criminal victimisation.

Ethics approval required

Study type(s)

Quality of life

Participant information sheet

Health condition(s) or problem(s) studied

Mental and behavioural disorders: Depression, anxiety, neuroses

Interventions

2161 were contacted and 243 replied, of whom 157 were eligible and were randomly assigned either to an education condition, to a psychological debriefing plus education condition, or to an assessment only condition. Education involved providing information about normal post-traumatic reactions. Debriefing involved in-depth probing about events, thoughts and feelings experienced during the crime. 138 participants were followed up at 6 months, and 92 at 11 months.

Intervention Type

Other

Phase

Not Specified

Primary outcome measure

PTSD and depression are the primary outcome measures.

Secondary outcome measures

Not provided at time of registration

Overall study start date

01/11/1994

Completion date

31/10/1997

Eligibility

Key inclusion criteria

Individuals who had been the victims of a violent crime within the past month. Subjects were recruited from police and hospital sources and interviewed in their own homes.

Participant type(s)

Patient

Age group
