Study information

Scientific Title

Study objectives

The primary hypothesis to be tested is that: Motivational Interviewing (MI) will reduce frequency of cannabis use in comparison to an equally credible Drug Information and Advice (DIA) intervention after three months among young people aged 16 to 19 years old in Further Education (FE) colleges.

Ethics approval required

Old ethics approval format

Ethics approval(s)

Study design

Randomised controlled trial

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Drug addiction

Interventions

Interventions will be delivered by practitioners trained in both interventions, and will embrace the range of drugs currently being used by the young person. Recorded interventions will be analysed to identify process mechanisms associated with outcomes. Follow-up data will be collected after three and six months.

Intervention Type

Other

Phase

Not Specified

Primary outcome(s)

The primary outcome will be frequency of use of cannabis.

Key secondary outcome(s)

1. Secondary outcomes will include the use of other illegal drugs and interactional indicators of risk
2. Secondary measures of use of cannabis, cigarettes, alcohol, stimulant drugs will include both consumption and related problems, including dependence

Completion date

09/01/2005

Eligibility

Key inclusion criteria

1. Weekly cannabis smokers
2. Aged 16 to 19 years
3. In Further Education (FE) colleges

Participant type(s)
